

MD NOMAN BISWAS SIBLY

Electrical and Computer Engineering Student

mdnomanbiswassibly@gmail.com • <https://www.linkedin.com/in/md-noman-biswas-sibly/> • Jhenaidah District, Bangladesh
<https://github.com/Md-Noman-Biswas>

Summary

Final-year Electrical and Computer Engineering student at Rajshahi University of Engineering & Technology with research interests in Trustworthy AI, deep learning, and computer vision. Experienced in image processing and AI-driven medical imaging research, with ongoing work involving medical image classification and vision-language models. Actively seeking research-oriented graduate opportunities in intelligent and reliable AI systems.

Research

Accepted Paper

- Co-author of "A Comprehensive Review of Convolutional Neural Networks: Foundations, Enhancements, and Applications", accepted in Neural Computing and Applications (Springer, Q1, IF 5.102).
- First Author, "Noise-Robust Gallbladder Ultrasound Image Classification Using U-Net GAN Denoising and Vision Transformer", accepted at QPAIN, 2026.
- First Author, "JTADC-Net: An Adversarial Joint Task-Aware Denoising and Classification Network for Noise Robust Gallbladder Disease Diagnosis" (BSPC, Q1, Under review)

Ongoing Research

- TrushWorthy AI (Thesis)

Education

Rajshahi University of Engineering & Technology

B.Sc. in Electrical and Computer Engineering (2022–Present) | Rajshahi, Bangladesh

Relevant Coursework:

Machine Learning, Data Structures & Algorithms, DSP, Computer Architecture, Control Systems, Embedded Systems

Projects

ATmega Neural Network – Digit Recognition

Embedded C, Python | GitHub: [ATmega-NeuralNetwork-DigitRecognizer](#)

Built a lightweight neural network running on an ATmega microcontroller to classify digits from a custom 4x4 dataset. Optimized computation and memory for embedded inference.

A Gallbladder Disease Classifier

Python, TensorFlow, Streamlit | GitHub: [Gallbladder-Classifer](#) | Demo: [Live Website](#)

Developed a deep learning-based web application for gallbladder disease classification from medical images. Built an interactive interface allowing users to upload images and receive real-time predictions. Integrated image preprocessing, model inference, and deployment for accessible AI-driven medical image analysis.

Football Club Logo Detection (YOLOv8)

Python, YOLOv8 | GitHub: [Football Club Detection](#)

Developed a YOLOv8-based object detection model to identify and classify football club logos from images, including dataset preparation and inference pipeline.

Experience

AI & Machine Learning Training — BDSET (Ongoing)

Engaged in an intensive hands-on training program focused on AI, Machine Learning, data-driven modeling, and real-world applications using Python and modern ML frameworks.

Programming Mentor — RUET Analytical Programming Lab

Taught programming fundamentals, algorithms, debugging, and problem-solving strategies.

Independent ML Developer

Built end-to-end ML and DL projects using TensorFlow and Scikit-learn; shared open-source implementations on GitHub.

Competitive Programmer

Solved 1000+ problems; achieved Pupil rank on Codeforces through regular contests and algorithmic practice.

Skills

Competitive Programming (Pupil on Codeforces) · C · C++ · Python · Git · Linux · TensorFlow · Scikit-learn · Pandas · NumPy · Matplotlib
Jupyter Notebook · SQL · Data Analysis · Problem Solving
